SPECIAL LECTURE

THE BIG BANG AND AFTER: MAN'S PLACE IN THE UNIVERSE

by

Prof. Trinh Xuan Thuan

Professor of Astronomy, University of Virginia

Abstract

Ever since 1543, when Copernicus dislodged the Earth from its central place in the Universe, modern astronomical discoveries have not ceased to shrink man's place in the universe ever more, both in space and time. This has led to the disenchantment of the world, expressed by the famous cry of anguish of the French philosopher Blaise Pascal in the XVII century: "The eternal silence of infinite space terrifies me."

Date : Saturday, January 07, 2012
